

Imagen 107: Registrar terreno.

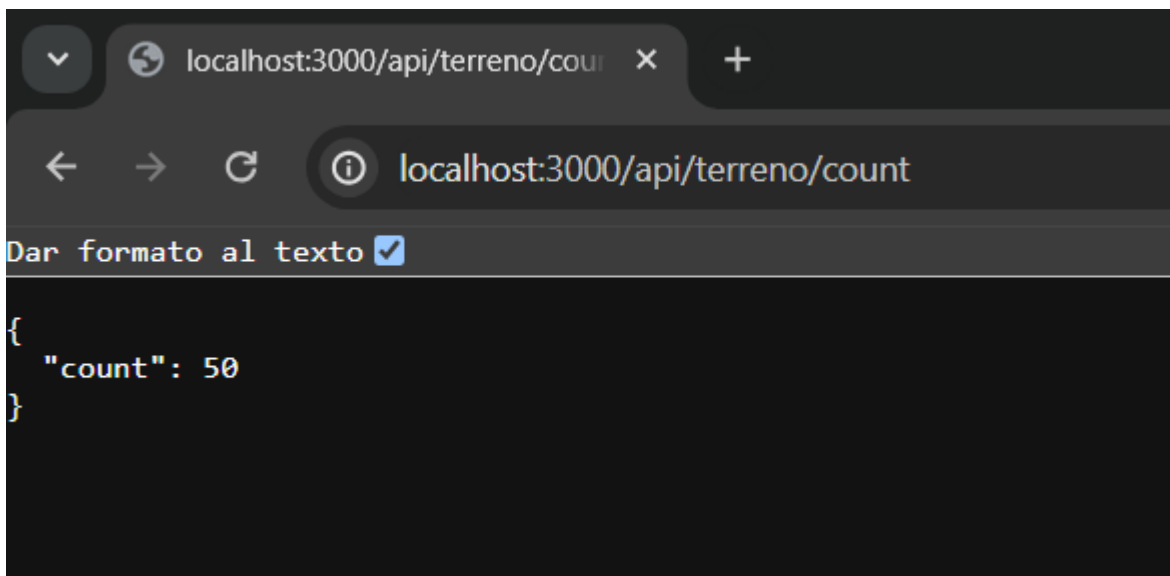

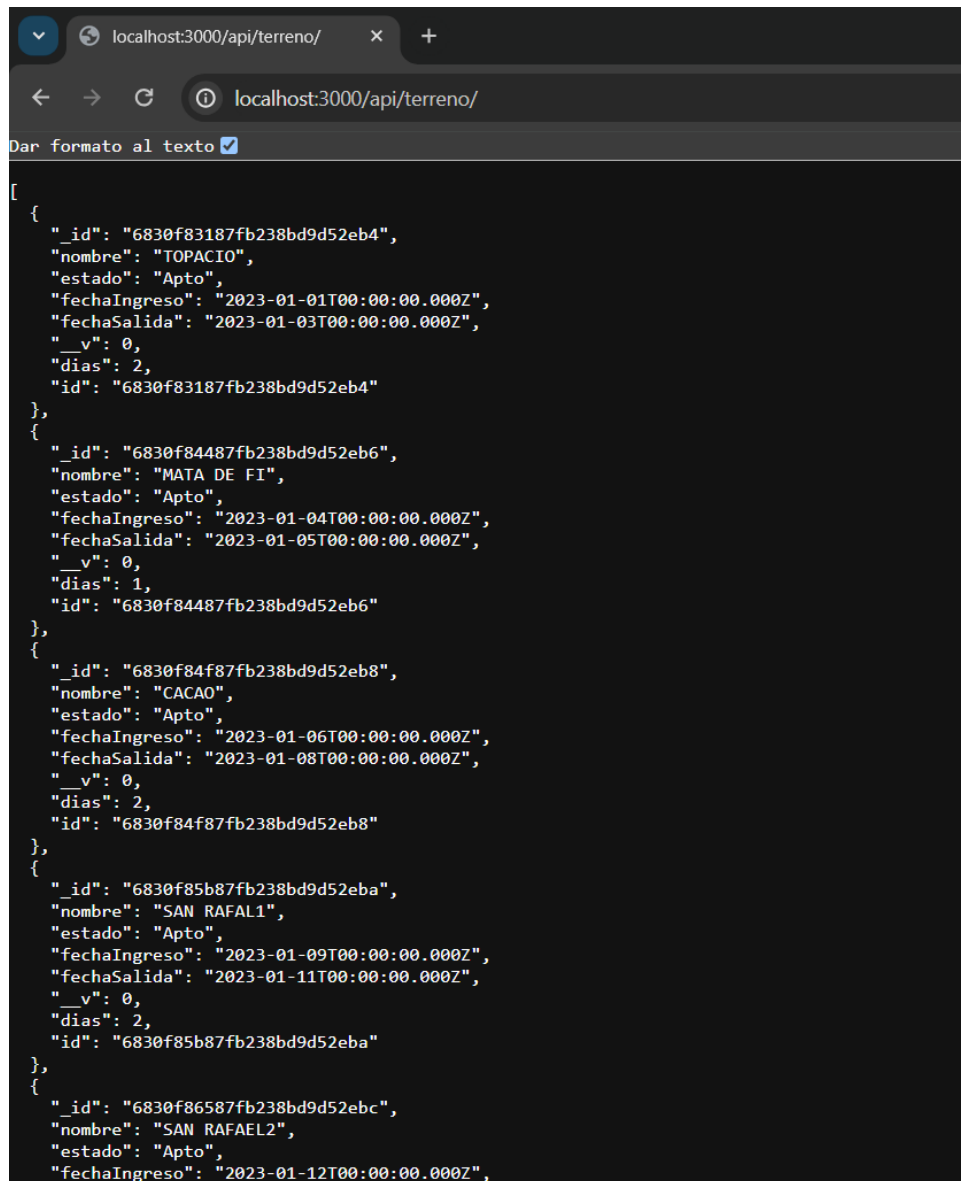

Imagen 108: Consulta la cantidad de registros

The screenshot shows a web browser window with the address bar displaying 'localhost:3000/api/terreno/'. Below the address bar, there is a checkbox labeled 'Dar formato al texto' which is checked. The main content area displays a JSON array of five objects, each representing a land record. The records are as follows:

```
[

Imagen 111: Consulta de los terrenos que se encuentran aptos

A screenshot of a web browser window displaying a JSON array of land entry and exit records. The browser's address bar shows the URL `localhost:3000/api/terreno/fechas`. The page content shows a JSON array with five objects, each representing a land entry or exit. Each object contains the following fields: `nombre` (name), `fechaIngreso` (entry date), `fechaSalida` (exit date), `dias` (days), and `id` (ID). The `id` field is null for all records.

```
[
  {
    "nombre": "TOPACIO",

```

Imagen 112: Consulta de entradas y salidas en los terrenos.

A screenshot of a web browser window. The address bar shows 'localhost:3000/api/terreno/dias'. Below the address bar, there is a checkbox labeled 'Dar formato al texto' which is checked. The main content area displays a JSON array of objects, each representing a land parcel with a 'nombre' (name) and 'dias' (days) property. The data is as follows:

nombre	dias
TOPACIO	2
MATA DE FI	1
CACAO	2
SAN RAFAL1	2
SAN RAFAEL2	1
SAN RAFAEL3	1
PORVENIR 1	1
PORVENIR 2	2
PORVENIR 3	1
PORVENIR 4	2
CASA QUEMA	1
